
a Agent-mediated task execution
Deploy accepted runtime artifacts
Goal & constraints
Target / limits
Memory & context
State / retained memory
Reasoning & decisions
Plan / predict / select
Execution interfaces
Skills, code, goals, actions
Robot + physical environment
Grounded state
Revise / stop
Execute
Actuation
Interaction / sensing
Perception & grounding
Scene / robot state
Monitor & recover
Verify / replan / retry
Action & control
Policies / controllers
Local feedback
Experience
Sensor feedback
b Capability acquisition & improvement
Evidence & diagnosis
Traces / demonstrations
Simulation / corrections
Construct / update
Memory / skills / harnesses
Models / tools / assets
Validate & retain
Development checks
Retain / reject candidates
Retained experiment assets feed later acquisition
Execution
Capability construction / revision
