
Update target
Experience / supervision
Retained artifact
Later use / attribution
Memory / knowledge
DROC; KnowBody
Corrections / preferences
Interactions / body data
Rules and body estimates
Conditional knowledge
Trace-based playbooks
Retrieve and check applicability
Match context and guidance
Retire conflicting records
Skills / programs
LRLL; WAA
Demonstrations
traces and failures
Functions / controller code
Policy graphs / multimodal
procedures and guards
Invoke and compose procedures
Separate new-task transfer
from earlier-task retention
Harnesses / tools
SHAPER; RoboFoundry
Development trials
API / context feedback
Context builders and routing
Tool contracts / recovery
Selection and replay verifiers
Match actor and tool access
Test interface compatibility
and prior-task performance
Neural components
RoboClaw; VLA-Corrector
Rollouts / teacher labels
Curated training records
Actor / perception / reasoning
and verifier checkpoints
Deploy the specified component
Hold scaffolding fixed
or report the package effect
Learning / experiments
Eureka; DexAgent
Task / training feedback
Demos / physical evidence
Rewards / curricula / recipes
Simulators / digital twins
Teaching protocols
Use in subsequent acquisition
Test utility and sim-to-real
Distinguish use from revision
Retain a versioned artifact, then test later use against a frozen comparator.
Construction, persistence and physical gain are distinct claims; targets may overlap.
Examples are illustrative. Report supervision, interface assumptions, resets and full acquisition cost.
